

B2B Pseudocode

#include statements

(string) generateOrderNum function with time_t implementation

Structs for Address(4 strings) Customer(string string double *), Product(int string double) and Cart(Product int double)

Cart vector (ShoppingCart)

function prototypes for sort and search functions

int main

declare variables

Create arrays/vectors

open file data and read file data

Define vector parse functions

(void) CustomerDataInput (string [] <> int)

loop that goes through filecount and prints class objects for each index of the array.
